

# CULTURAL NEUROSCIENCE AND GLOBAL MENTAL HEALTH

Joan Y. Chiao

International Cultural Neuroscience Consortium

“Theme on Peace and Justice”

Cultural Neuroscience and Global Mental Health Symposium

ICNS 2022 Conference

# GRAND CHALLENGES IN GLOBAL MENTAL HEALTH

- Global threats of national and international concern present considerable challenges to health and human development.
- The presence of war and conflict presents a considerable threat to the health and human security of nations.
- The vulnerabilities of war and interethnic conflict are of concern to the health and security of nations.
- The amelioration of war and conflict is foundational to the attainment of the highest levels of human development.

# GLOBAL THREATS

- Global threats present considerable challenges to the health and security of nations.
- The negotiation of global threats is of interest to the resolution of the crises to health and security of nations.
- The control of the perception of risk of global threats is central to the reduction of threats of global concern.
- The securitization of the health and security of nations is fundamental to the amelioration of global threats and concern.

# GLOBAL HEALTH

- The protection of health and human security is vital to the promotion of global health.
- The consideration of global threats facilitates the understanding of the perception of risk and threats in the resolution of conflict and war.
- The mitigation of the perception of risk amidst global threats is of importance to the reduction and amelioration of global threats.
- The reduction of the perception of risk and the securitization of the state and its people is fundamental to the amelioration of threats of global concern.

# GLOBAL MENTAL HEALTH

- The protection of health and human security is central to promotion of mental health of nations.
- The vulnerabilities of war and conflict present formidable challenges to the health of populations.
- The recovery from war and conflict is essential to the revitalization of communities in post-conflict recovery.
- The development of the programs for the promotion of mental health is foundational to the health and well-being of nations.

# CULTURE AND GLOBAL MENTAL HEALTH

- Culture is fundamental to the understanding of the interests and concerns of the health of populations.
- Cultural considerations are of importance to the societal concerns that contribute to the improvement of health conditions.
- The considerations of culture are central to the discernment of the societal concerns that lead to the improvement of societal outcomes.
- The promotion of culture and mental health is fundamental to health and well-being.

# CULTURE AND MENTAL HEALTH

- Culture affects the risk and protective factors that contribute to mental health.
- Culture affects the conceptualization of health and disease.
- Culture bolsters resilience and reduces vulnerabilities to mental disorders.
- Cultural factors serve as protective factors that mediate or moderate the risk of mental health disorders.

# CULTURE AND HUMAN DEVELOPMENT

- Culture is foundational to human development and human fulfillment.
- The protection of rights and freedoms is fundamental to the promotion of health and human security.
- The amelioration of the threats and concern to health and human security is central to the protections and freedoms of the state and its people.
- Culture and human development is fundamental to the recognition of the importance of the dignity, liberty and freedoms of all people.

# CULTURE AND SOCIAL DEVELOPMENT

- The recognition and appreciation of culture is of importance to the social development and empowerment of nations.
- The understanding of cultural tradition and cultural identity is foundational to the protections and freedoms of all nations.
- The promotion of interracial and interethnic attitudes generates and maintains the intercultural relations of pluralistic societies.
- The development of cultural programs and initiatives is fundamental to the empowerment of communities and nations.
- The leadership and involvement of culture is essential to social development and empowerment of all nations.

# CULTURE AND SOCIAL EMPOWERMENT

- The social coordination and action of groups contributes to the empowerment of communities and nations.
- The development of social capital is foundational to the building of social organizations, networks and institutions that are of importance to social empowerment.
- The programs and initiatives of cultural diversity, equality and inclusion leads to the coordination and empowerment of social action.
- The recognition and appreciation of the importance of the cultural aspects of ways of life leads to social empowerment.
- Culture is fundamental to the social development and empowerment of all nations.

# CULTURAL NEUROSCIENCE AND GLOBAL MENTAL HEALTH

- The study of the etiology of mental disorders is a chief priority of the global mental health agenda.
- Research on cultural neuroscience contributes to the prevention and intervention of mental health.
- Evidence-based approaches contribute to the development of resources for the promotion of mental health.
- The development of scientific infrastructure and resources of mental health is of central importance to health and well-being.

# CULTURE AND HEALTH

- Cultural considerations are of central importance to the societal concerns that impact the improvement of health of the population.
- Considerations of culture and society impact the societal conditions that affect access to resources of health and education.
- The equitable access to resources of health and education lead to the improvement of societal and health outcomes of the population.
- The equitable distribution of resources are foundational to the attainment of social equality and health equity.

# CULTURE IN HEALTH PREVENTION AND INTERVENTION

- Culture contributes to the design of strategies of health prevention and intervention.
- Cultural representation promotes the equitable distribution of material resources of health promotion.
- Cultural considerations impact the effectiveness of evidence-based intervention.
- The promotion of cultural diversity, equality and inclusion benefits the equitable conditions that impact culture, health and society.

# DEVELOPMENT OF CULTURE AND HEALTH PREVENTION AND INTERVENTION

- The design of strategies of culture in health prevention and intervention impact the effectiveness of culture and mental health promotion.
- Culture bolsters resilience and reduces vulnerabilities to mental disorders.
- Culture promotes protections and freedoms that contribute to the amelioration of disorder and disease.
- The development of culture and health prevention and intervention programs lead to the promotion of culture and mental health.

# CULTURE AND HEALTH PROMOTION

- \* Culture impacts the development and implementation of health promotion.
- \* Cultural considerations guide the development of health policies and planning that contributes to the implementation of health promotion.
- \* Cultural representation improves the development and implementation of health promotion.
- \* Cultural diversity, equality and inclusion is foundational the promotion of health and well-being of all nations.

# CULTURE AND MENTAL HEALTH PROMOTION

- \* Cultural development is of importance to the maintenance of cultural ways of life.
- \* The participation and involvement in cultural tradition and practices leads to the promotion of cultural life.
- \* The cultural development of communities and nations contributes to the building of awareness and recognition of the importance of culture.
- \* Cultural leadership and participation is foundational to the promotion of culture and quality of life.

# DEVELOPMENT OF CULTURE AND MENTAL HEALTH PROMOTION

- \* The development of culture and mental health promotion consists of the programs and policies that improve the health and well-being of all.
- \* The design of prevention and intervention strategies of culture for the promotion of mental health and well-being contribute to the promotion of culture and health.
- \* The programs of culture and mental health promotion contribute a substantial resource of information and data that are beneficial to the equitable access to resources and the attainment of societal equality and health equity.
- \* The promotion of culture and mental health and the development of programs and initiatives of culture, health and society are foundational to human development.

# PROGRAMS OF CULTURE AND MENTAL HEALTH PROMOTION

- Programs of culture and mental health promotion are important to the health and well-being of nations.
- The development of programs of culture and mental health promotion build scientific infrastructure and community-based programs for the promotion of the practices and policies of health.
- The building of scientific knowledge of culture and mental health improve societal and public understanding of the importance of culture in the promotion of mental health and well-being.
- The promotion of the societal and educational benefits of culture on mental health and well-being advances quality of life and fulfillment of human potential.

# PROGRAMS OF SOCIAL AND EMOTIONAL LEARNING

- \* Programs of social and emotional learning contribute to mental health promotion that impacts the post-conflict recovery of victims.
- \* The development of programs of social and emotional learning include the scientific and educational resources that improve the societal outcomes of vulnerable populations.
- \* The scientific and educational understanding of the importance of social and emotional competencies contributes to the promotion of mental health and well-being.
- \* The scientific and public support for programs of social and emotional learning benefit the quality of life for all.

# ADVANCES IN CULTURAL NEUROSCIENCE AND GLOBAL MENTAL HEALTH

- \* Advancement of research, advocacy and policymaking of cultural neuroscience and global mental health is fundamental to broaden the impact of culture on mental health and well-being of all people.
- \* The advances of research innovation demonstrate the novel tools and technologies that benefit the capabilities of health and medicine.
- \* The promotion of international cooperation and scientific innovation leads to the adaptability of society and health for the benefit and improvement of health and medicine.
- \* The advancement of science and technology for the promotion of culture in health and medicine leads to the improvement of health and human development of all nations.
